The probes are manufactured complementary to the H.C. 185 rRNA or rDNA gene. This region also corresponds to the bases 172-193 of Saccharomyces cerevisiae 185 rRNA. The probe is specific for H.C. and can be used to distinguish the fungus from all others, even its nearest phylogenetic neighbour Blastomyces dermatitidis. Nucleic acid hybridisation of the specific probe is enhanced by the use of helper probes (AAQ73434-5). This method allows the detection and/or the quantitation of H.C. from samples e.g. body fluids, tissue samples, soil and water.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A probe (AAQ73433)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Probe; detection; Histoplasma capsulatum; 18S; rRNA; rDNA; hybridisation; Saccharomyces cerevisiae; fungus; phylogenetic; helper probe; soil; water; Blastomyces dermatitidis; quantitation; sample; body fluid; ss.
A probe (AAQ73433) or its complement (AAQ73436) and corresponding RNA sequences (AAQ73437 and AAQ86436) used for the specific detection of all strains of Histoplasma capsulatum (H.C.). The probes are manufactured complementary to the H.C. 18s TRNA or TDNA gene. This region also corresponds to the bases 172-193 of Saccharomyces cerevisiae 18S TRNA. The probe is specific for H.C. and can be used to distinguish the funguest from all others, even its nearest phylogenetic neighbour Blastomyces dermatitidis. Nucleic acid hybridisation of the specific probe is enhanced by the use of helper probes (AAQ73434-5). This method allows the detection and/or the quantitation of H.C. from samples e.g. body

                                                                                                                                   A probe (AAQ73433) or its complement (AAQ73436) and corresponding RNA sequences (AAQ73437 and AAQ86436) used for the specific detection of all strains of Histoplasma capsulatum (H.C.). The probes are manufactured complementary to the H.C. 18s IRNA or IDNA gene. This region also corresponds to the bases 172-193 of Saccharomyces cerevisiae 18S IRNA. The probe is specific for H.C. and can be used to distinguish the fungus from all others, even its nearest phylogenetic neighbour Blastomyces dermatitidis. Nucleic acid hybridisation of the specific probe is enhanced by the use of helper probes (AAQ73434-5). This method allows the detection and/or the quantitation of H.C. from samples e.g. body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAQ73437 standard;

The probes are manufactured corresponds to the H.C. 18s TRNA or TDNA gene. This region also corresponds to the bases 172-193 of Saccharomyces cerevisiae 185 rRNA. The probe is specific for H.C. and can be used to distinguish the fungus from all others, even its nearest phylogenetic neighbour Blastomyces dermatitidis. Nucleic acid hybridisation of the specific probe is enhanced by the use of helper probes (AAQ73434-5). This method allows the detection and/or the quantitation of H.C. from samples e.g. body

                                                                                                                                                                                             The present invention describes a method for monitoring differential compression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTs care used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes in a first filamentous fungal (FF) cell relative to expression of the cell same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production of the global expression of genes from FF cells allows the production discovered, possible functions of unknown open reading frames can be centified and gene copy number variation and stability can be discovered. The expression of genes can be used to study how FF cells and to changes in culture conditions, environmental stress, spore centified and gene copy number variation and stability can be complhogenesis, recombination, metabolic or catabolic pathway centified constitute conditions, environmental stress, spore centified constitutes are conditions, environmental stress, spore conditions constitutes are conditions of the gene products on an array equals one gene or open reading frame, and organisation of the carray equals one gene or open reading frame, and organisation of the carray equals one gene or open reading frame, and organisation of the carray equals of the results. AAF0478 to AAF11247 represents ESTs from Aspergillus organisation and affect and presents ests from Aspergillus organisation of the carray equals of the affect to AAF11853 represents ESTs from Aspergillus organisation con an affect fically claimed in the present in the present con appear and constitute of the carray equals on the present est est from a condition of the carray equals organisation of the carray equals of the carray equals

                                                                                                                                                                                                                                                                                                                                                                                                                                                             acid (I) in a body sample which comprises the isolation of (I) followed by a two-step polymerase chain reaction (PCR) amplification of any nucleic acid having a sequence essentially homologous to part of the reaction of the supergillus 18s rRNA gene using primers used in the first step that do not overlap with those in the second step. The method is used for early diagnosis, and monitoring, of aspergillosis, particularly invasive infections in hematological-oncological patients with long-term suppression of the immune system. Unlike the known method using overlapping primers, this process provides efficient and reliable detection of Aspergillus in clinical situations. It is specific for Aspergillus (it detects the species terreus, niger, versicolor, clavatus, flavus, and fumigatus, but not oryzae, nor bacteria or fungi from any other genera). This sequence represents the DNA sequence of Aspergillus fundamental accounts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (HEHL/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a new microbe of Acinetobacter or Burkholderis genus producing aldonic acid and oxidising specifically the hemiacetal hydroxy group of a saccharide having said hydroxy group. Aldonic acid is used as a mineral reinforcing agent. The present sequence was used to its used as a mineral reinforcing agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1745 BP; 448 A; 382 C; 465 G; 450 T; 0 other;

                                    The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AAI99683) and H37Rv (AAI99682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mycobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mycobacterium tuberculosis strain H37Rv genome SEQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SSXSS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                  The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AAI99683) and H37RV (AAI99682). The method is useful for evaluating strain variation of tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic

                                In the invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and By 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label cound to each probe of the microarray. The probes are useful for cerifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for expression analysis is useful for gene discovery, and for expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               04-FEB-2000; 2000US-0180312; 26-MAY-2000; 2000US-0207456; 30-UNA-2000; 2000US-0608408; 03-AUG-2000; 2000US-06323665; 21-SEP-2000; 2000US-0234687; 27-SEP-2000; 2000US-0236359;
                                                                                                                                                                                                                                                                                                                                                                 New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2001-496933/54.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Penn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                30-JAN-2001; 2001WO-US00662
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  W0200157271-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; microarray; single exon probe; gene expression; breast;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human breast cell single exon nucleic acid probe #3245

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ABA54997 standard; DNA;

                                                                                                                                                                                                                                                                                                                                                                                                              measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cances such as lymphoma, leukaemia and myeloma.

The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Mote: The sequence data for this patent did not form part of the printe specification, but was obtained in electronic format directly from WIPO

Result

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Coccidioides immitis.

Coccidioides immitis

Eukaryota; Fungi; Ascomycota; Pezizomycotina; Eurotiomycetes;
Onygenales; mitosporic Onygenales; Coccidioides.

E 1 (bases 1 to 567)

Is Gardner, M.J. and Kirkland, T.

Generation of ESTs from Coccidioides immitis spherule cDNA libration of ESTs from Coccidioides immitis spherule cDNA libration of Extraction of Estraction of Extraction of Extracti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   567 bp
